

DJIBOUTI Price Bulletin

February 2011

The Famine Early Warning Systems Network (FEWS NET) monitors trends in staple food prices in countries vulnerable to food insecurity. For each FEWS NET country and region, the Price Bulletin provides a set of charts showing monthly prices in the current marketing year in selected urban centers and allowing users to compare current trends with both five-year average prices, indicative of seasonal trends, and prices in the previous year.

Sorghum, wheat flour and Belem rice are the most important food commodities. Sorghum flour and Belem rice are most commonly consumed commodities in urban areas. Wheat flour mixed with sorghum flour is also purchased for the production of local pancakes, an important staple food for poor and middle-income households. Over 65 percent of the total population for Djibouti lives in and around Djibouti City, the capital, making this market the most important for understanding food security conditions. Dikhil is the second largest city and it supplies the rural communities in and around the city. Tadjourah supplies the central region, mainly urban areas. The pastoral areas in the northwest receive most of their staple food from neighboring Ethiopian markets of Elidar and Manda. Alisabieh supplies the pastoral border areas in the southeast. Arta is located in isolated area and supplies only the city. Obock is the main market for inhabitants of the central lowlands.

*FEWS NET gratefully acknowledges the local government agencies, market information systems, UN agencies, NGOs, and private sector partners.
