\* Wholesale prices  
 † Does not reflect current month's price

NOTES: The commodity shaded in gray is the staple most often consumed by the poorest of the poor in the urban area indicated. Additional commodities provided are important commodity(ies) consumed in the same urban area. Average monthly prices are calculated using weekly price data available at the time of publication, and may be based on less than one full month of price data. Consequently, monthly prices reported here may be different than those reported in FEWS NET monthly Food Security Updates, which are based on a full set of weekly price data for the month. ▶▶▶▶ The symbols depict the direction of price changes: the red upward-facing arrow denotes an increase of greater than 5 percent, the blue horizontal arrow denotes no change, or changes that are smaller than 5 percent, and the green downward-facing arrow denotes price decreases that are greater than 5 percent. The first arrow corresponds to the change in price over one month, the second arrow refers to the average percentage change over the past three months, and the third arrow reflects the average monthly percentage change over the previous year. The “-” symbol indicates that no data are available.
