

The Famine Early Warning Systems Network (FEWS NET) monitors trends in staple food prices in countries vulnerable to food insecurity. For each FEWS NET country and region, the Price Bulletin provides a set of charts showing monthly prices in the current marketing year in selected urban centers and allowing users to compare current trends with both five-year average prices, indicative of seasonal trends, and prices in the previous year.

FEWS NET gratefully acknowledges the Ministry of Agriculture and Forest (MAGFOR) and the Energy Institute (INE).

Maize, beans, and rice are the primary source of calories and protein in Nicaragua. Nicaragua has historically had a deficit of both maize and rice, but Nicaragua is a major exporter of beans in the region. Managua is the capital city and largest market. Chontales and Rivas are major maize and bean assembly markets and serve as a key export gateways to Costa Rica. Rivas is the largest supplier for cross-border trade with Costa Rica. León in the west and Esteli at north west are large markets with strong trade links to both Honduras and El Salvador. Matagalpa is a key central assembly market for domestically produced maize and beans. Bluefields and Billwi are markets that serves the sparsely populated and chronically food insecure Caribbean coast.
